# Cultural content in the online environment: Analyzing the value transfer in Europe

Roland Berger
Strategy Consultants

Paris, November 2015

Forewords

■ This report was prepared with the support and upon the request of GESAC (European Grouping of Societies of Authors and Composers)

■ This report is based on publicly available figures and Roland Berger Analysis. In addition, 4 country-specific usage studies have been performed in France (Google usage study in February 2015 and Facebook usage study in March-April 2015) and in Italy (Google usage study in March 2015 and Facebook usage study in June 2015) which have been the basis for Search Engines and for Social Networks analysis

■ This report is mostly an enhancement over usage studies aiming at assessing the share of Technical Intermediaries revenues directly generated by all usages (access, talk, e-commerce…) related to all Cultural Contents. A first estimate of the indirect impacts (i.e. related to the implicit effect such as stickiness and usage frequency) is also conducted in the report

■ When public figures were not available (such as country-level revenue for most players), Roland Berger estimates have been used, based on publicly available figures (including population, households, share of connected population, advertising market data,…)

Contents

EXECUTIVE SUMMARY
Cultural content in the online environment: Analyzing the value transfer

This report aims at answering key questions regarding digital Technical Intermediaries and the "value generation gap" for cultural content

FINAL VERSION

1 **Context**

> **From the medium and device perspective, cultural content**, which includes among others cinema, music, radio, photography, TV, press, live, books and video game content, is **shifting from physical ownership to a cloud-based and flow-based usage**

> Consumers have followed and adopted successive technology developments and are now **connected** almost **continuously**

> As a consequence, cultural content offer is now particularly abundant, opening the field to an **heterogeneous scope of so-called digital intermediaries** (Licensed Digital Distributors and Technical Intermediaries), and raising the issue of **value creation from cultural content in the digital environment**

2 **Scope of the study**

> Along with licensed digital distributors (OTT services, including generalists such as iTunes and specialists such as Netflix or Spotify), **Technical Intermediaries cover a wide range of players and models**, from Search engines and Social Networks to Content Aggregators and Cloud Services specialists

> This report objective is to answer key questions regarding **Technical intermediaries at European level that may benefit from responsible for a "value generation gap" from cultural content**

  – Among **digital intermediaries**, some categories should remain out of scope being covered by **licensing agreements and compensation systems**

  – Therefore, the report will focus especially on **Technical intermediaries which generate value from cultural content** without any compensation or without appropriate compensation to date

> Several OTT players have been selected as **benchmarks** for this study, with an analysis of their service offer types and business models: Netflix and Spotify

> Key output is to understand and assess overall **value creation levers**, being either in terms of **revenue** or **other mechanisms**

Cultural content offer available through connected usages is now particularly abundant

Cultural content offer panel available from a connected device

1) Network Private Video Recorder

Technical intermediaries as well as licensed content distributors cover a wide range of players and models

Mapping of major intermediaries in the digital ecosystem

| | Scope of the project | To be benchmarked | Out of scope sites | Out of scope |

Licensed digital content distributors are the reference channel for digital distribution - ~70% of gross revenue is spent on content

> Licensed digital content distributors are of importance as they tend to stand as the **reference channel for content distribution**, being for example for music (Spotify) or video (Netflix)

> Licensed digital content distributors include both **pure online players** (Spotify) and players that successfully **achieved a digital transformation**, as illustrated by Netflix which historical activity (DVD rentals) accounts for less than 15% of revenue as of today

> Cultural content is therefore both the basis and the core of their Business Model and is a key factor to retain customers – **100% of their value and revenue are based on distributed cultural content**

> **Players are now strongly challenged** in the new environment, as illustrated by the current shake-up taking place between record companies, cultural content e-shops and rip-based content aggregators / content hosts (e.g. Grooveshark shutdown in may 2015)

> Value creation mechanism can differ from one player to other:

A **Spotify – freemium model – Average royalty repayment of 70% of gross revenue**

– 9% of revenue is generated by advertising to "free" users; those represent 2/3 of the customer base and have a negative average net revenue per user (ARPU, after royalties)

– 91% of revenue is generated by premium users fees; those represent 1/3 of the customer base and generate a net ARPU of ~42.7 EUR per year (after royalties)

– Overall, Spotify generates an average annual net revenue per user of 5.1 EUR (after royalties)[1]

B **Netflix – subscription-based model – Average content acquisition cost of 73% of gross revenue**

– 100% of Netflix revenue is generated by subscriptions (DVD rental and video streaming)

– 86% of revenue is generated by video streaming, which is used by 89% of the customer base (gross ARPU of 62 EUR)

– Overall, the website generates an average annual net revenue per subscriber of 16.6 EUR per user

1) *This figure is based on blended approach of free and paid streams. It is to be noted that the business model mainly relies on the subscription model, which is more likely to be the proxy when comparing with the completely free streaming services undertaken by the "technical intermediaries" analysed in this report*

FINAL VERSION

Benchmarked pure online licensed digital content distribution players from music and video industries show comparable value sharing approaches with right holders

Benchmarks summary on online content streaming [2014]

1) Number of users: end of period

Source: Roland Berger analysis

The direct impact of cultural content on technical intermediaries revenue generation reaches 23% of their total revenue, to an amount of EUR 5.0 bn for Europe in 2014 (1/2)

Technical intermediaries create value thanks to cultural content in two ways:

> **Direct impact**, through **direct consumption or showcase** of (or monetized direct links to) cultural content (e.g. Google AdWords, in Facebook feed,…)

> **Implicit or collateral impact** (qualitative): in a fast-moving, technically complex, **oligopolistic and usage-driven competition**, market leaders derive increased future revenue generation capabilities, consumers knowledge and market valuation from those same **usages that are significantly driven by cultural content**

FINAL VERSION

Roland Berger
Strategy Consultants

The overall EU value gap yields from a bottom-up and segmented approach

Methodology

FINAL VERSION

1. **Analysis of the Value Chain and identification of key players per typology**

2. **Assessment for main players, of the share of revenue directly generated / due to cultural content**

ILLUSTRATIVE

3. **Extrapolation of the results to build the European picture**

> **Extrapolate** data either for an **industry** (eg music) or to a given **typology** of players (eg search engine)

> **Example** : Google has 96% of market share (# users in EU, 2014), which easily provides a reliable picture of search engines

Direct

Total revenues

Direct : revenue generated from the direct monetization and direct commerce of cultural content or related advertising inventory

> **Is it a "normal" commercial deal ?**

> **Is the distribution legal ?**

> **Is there an agreement with right holders ?**

> **Is there a value generation gap ?**

Content direct contribution to revenue generation can be assessed as well as implicit contribution to value creation

Content direct impact on value creation

FINAL VERSION

Approach for revenue generation: direct

Implicit value creation mechanisms

ASSESSMENT

Content contribution to revenue generation

QUALITATIVE AND QUANTITATIVE

Is it a main lever in player X business model ? | **Role of content**

> Market capitalization
> Market share
> Share of wallet
> Brand image

> Better understanding of users and needs
> Customer data monetization
> Machine learning

Exemple

Contribution to long term value creation

ASSESSMENT

QUALITATIVE

Overall value creation driven by cultural content

The direct impact of cultural content on technical intermediaries revenue generation reaches 23% of their total revenue, to an amount of EUR 5.0 bn for Europe in 2014 (2/2)

Overall **direct impact cultural content** in revenue generation by Technical Intermediaries is **very significant,** and stands at **EUR 5.0 bn for Europe in 2014, i.e. 23%** of Technical Intermediaries revenue

> **Most of the value creation relates to Search Engines**, in part due to their very large market: for S.E. only, cultural content has a direct impact of **EUR 3.0 bn on revenue** (18% of the total), and **for Google only, EUR 2.8 bn**.

> **Social Networks** are the second largest beneficiaries of cultural content-driven revenue generation: **direct impact is above EUR 1.3 bn (43%)** due to the sheer **quantity of embedded content**, that drives advertising revenue

> **Public platforms** such as YouTube are highly reliant on cultural content, which have a direct impact on **66% of their revenue (EUR 0.48 bn)**; **Aggregators** are in a similar situation (**75% direct impact**, to EUR 75 m), while **Lockers** are impacted **only to 3%** of their revenue

> Such figures do not include the "hidden" impact of illegal usages, which are cannibalizing value worth billions of Euros

FINAL VERSION

Beyond revenues, all intermediaries benefit from the impact of cultural content on implicit and collateral value creation

Importance of cultural content in other mechanisms of value creation

FINAL VERSION

Importance of cultural content in implicit value creation

Rationale

Search engines
Google

Low — High

> The **relevance and exhaustiveness** of search results will impact the **relative performance** of players like Google, with **direct consequences** on market **capitalization** / share, brand **image**, or better **understanding** of users and needs

Content aggregators
tunein

> Cultural content is at the **heart of players** business like TuneIn, with content **range** and **quality** impacting mostly the **market share** and **brand image**

Social Media
facebook. twitter

> Cultural content has an impact on customer **stickiness** and therefore **market capitalization**, but it also **impacts heavily** the **understanding** of users and needs when the content is **shared**, **liked** or **commented**

Public clouds and platforms
You Tube box Grooveshark

> Public platforms benefit mostly but strongly from **the collateral effect of direct value creation** on sites embedding content from public cloud services

No matter the profile, or size, or business model of analysed players , they all benefit – beyond revenues – from cultural content in terms of implicit and collateral value creation

Roland Berger
Strategy Consultants

The direct European cultural content value differ from one intermediary typology to the other – overall several billions at stake

Technical intermediaries as well as licensed content distributors cover a wide range of players and models

Mapping of major intermediaries in the digital ecosystem

|		
Digital distributors	**Licensed digital content distributors**	**OTT services** — iTunes, amazon, Google play, NETFLIX, blendle, Spotify, fnac / **Media players on managed networks** — CANAL PLAY VOD, MY TF1, FILMO
FINAL VERSION / **Technical intermediaries**	**Search Engines**	**Search engines** — YAHOO!, bing, Google, Qwant, DuckDuckGo
	Content Aggregators	**Publisher-based content interface** — tunein, iHeart RADIO / **Redirection platforms** — 8tracks, THE HYPE MACHINE, bop, Can I Stream.it? / **P2P portals and Redirection platforms** — DDSTREAM, papystreaming, KICKASS Torrents, The Pirate Bay
	Social Networks	**Personal networks / Social media** — facebook, twitter, Pinterest, Instagram, flickr, +8 / **Blog publishing platforms** — tumblr, Blogger, Skyrock.com / **Professional networks** — viadeo, LinkedIn
	Cloud Services	**Lockers** — Dropbox, OneDrive, amazon cloud drive, iCloud, box, SpiderOak, Google Drive / **Public video/ audio platforms** — YouTube, vimeo, Daily motion, soundcloud, veoh, metacafe, BREAK.com / **Rip-based Public video/ audio platforms** — PUREVID, Grooveshark
	Private Cloud > Services	**Cloud player services** — iTunes Match, amazon Prime music, Google Play Music / **nPVR (nDVR, RS-DVR)** — kpn, Telefonica, belgacom, FASTWEB, telecable / **ISP NAS DVR** — freebox
	> Devices / Backup based	**Pure back-up services** — CARBONITE, CRASHPLAN, Jungle Disk, symform / **NAS** — Synology, QNAP, HITACHI Inspire the Next, Thecus

Scope of the project   To be benchmarked   Out of scope sites   Out of scope

Categories in the value chain of cultural content exploitation – Glossary

Licensed content distributors

> OTT services

> Managed networks

> Digital content rental/ purchase services operated by OTT players (streamed or downloaded)

> Digital video content rental/ purchase services operated by TV groups and networks (TV VoD platforms) (streaming-based)

Technical intermediaries

Search Engines

> Cloud-based solutions designed to search on the internet through indexing of all sources and redirecting users

Content aggregators

> Publisher-based content interface

> Indexing and streaming service of publication-based content i/ nterface for online content (radio networks, radio stations, TV, …)

> Redirection platforms

> Indexing service of video/ audio content from public cloud patforms and services

> P2P portals and Redirection platforms

> Indexation services of peer to peer content sharing (each peer is both user and host) and indexing service of video/audio content,

Social Networks

> Internet-based interactive applications allowing users to create, share or exchange all types of content (incl. UGC[1] as well as cultural content)

Cloud Services

> Lockers

> Hosting services allowing users to upload personal content to a cloud so that it may be accessed or shared from multiple devices

> Public video/ audio platforms

> Online content distribution services based on content posted by owners (online/streaming based)

> Rip-based public video/ audio platforms

> Online content distribution services based on content mostly ripped from other sources

Private Cloud

> Cloud player services

> Personal cloud-based music storage and streaming services available for personal or shared usage

> nPVR (nDVR, RS-DVR)

> TV content recording services accessible from multiple devices, stored on operators servers (nPVR) or on a NAS provided by the operators (NAS based DVR)

> Devices / Backup based

> File computer data storage server connected to a computer network (NAS) / online NAS back-up services

1) User Generated Content

The study will therefore focus on Technical Intermediaries which do not contribute to compensation mechanisms to date

Evolution of the value chain of cultural content exploitation – Examples of players

FINAL VERSION

Past: Stored Usage

| Production (physical and digital) | Publishing (physical and digital) | Distribution (physical and digital) | Outlet (physical or e-commerce) | Storage and Copy |

Present: Connected Usage

IBM

Flow of digital content   Storage and Sharing   1) Network Private Video Recorder

OTT players compete with traditional content distributors and managed networks with an IP-based on-demand content offer to their customers

Licensed Digital Content Distributors: OTT services

FINAL VERSION

1 Who are they?

> Digital content rental/ purchase services operated by OTT players (streamed or downloaded)

> **Subscription-based**   > **On-demand services**

Spotify NETFLIX DEEZER   amazon iTunes Google play imineo fnac

> Spotify has raised USD 538 m since creation and paid ~USD 2 bn in royalties over 2011-2014

> Netflix content costs amounted to USD 2,776 m in 2014

> OTT players generate revenue through a **freemium model** combining:
  – a **subscription-based paying offer**
  – an **advertising-base free offer**

> Hence, revenue is mainly driven by:
  – **# of users** and **usage levels**
  – **available inventory** and **valuation** of inventory

> **Range of content availability** and **uniqueness** directly impact customer perception on the offer and their willingness to consume more content

3 How do they generate revenue?

2 What kind of relationship with other players?

Agreements with beneficiaries ?	Inclusion in scope [1]
✓	✗

> Display cultural content in the frame of agreement with right holders

> **Main legal rental / purchase services for cultural content**, streamed or downloaded to the customer's device, in the frame of an **agreement** with the right **holders**

> Positioned as the **reference legal channel** for online **cultural content** distribution and therefore represent a **relevant benchmark** point

4 Why are they important?

1) For benchmark purpose only
Source: Netflix, Spotify, press, Roland Berger analysis   ⌐ Detailed analysis in the study

Roland Berger
Strategy Consultants

OTT players provide Apps and websites for direct content consumption

Licensed Digital Content Distributors: OTT services

FINAL VERSION
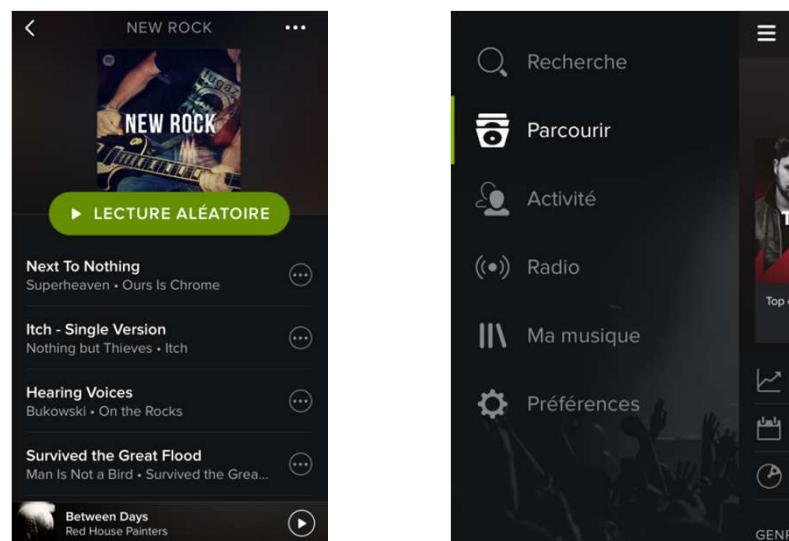

Spotify

Netflix

> Possibility to share a link on social media, redirecting to Spotify

> Redirection to Netflix exiting from redirection platforms (ex: Can I Stream It)

Search engines are driving most of their search revenue from sponsored links and benefit from indexing cultural content at marginal cost

Technical intermediaries – Search engines

FINAL VERSION

1 Who are they?

> Cloud-based solutions designed to search on the internet through indexing of all sources and redirecting users

> Google has a ~96% market share in Europe with ~EUR 15.5 bn in revenue (Google Search)

> Search engines mainly generate revenue through **sponsored links**

> Hence, revenue is mainly driven by **available inventory** and **valuation** of inventory

> Key success factors for revenue generation include:
  – **Relevance** and **thoroughness**
  – Customer **stickiness** and customer **targeting**
  – **Ubiquity** for advertisers

3 How do they generate revenue?

2 What kind of relationships with other players?

Agreements with right holders?	Inclusion in scope?
✓ 1) ✗	✓
> May **benefit from indexing cultural content** (traffic, exhaustiveness, …) **at marginal cost**

> **Directing towards cultural content** published:
  – by right-holders (e.g. blogs)
  – on cloud platforms (e.g. YouTube)
  – elsewhere (e.g. Facebook, but also illegal platforms
> **Internet navigation main tool**
> **Frequent entry point** to any destination on the web

4 Why are they important?

1) Google European fund for press: in April 2015 Google has pledged to give EUR 150 m to European news publishers and journalism-focused start-ups over the next three years
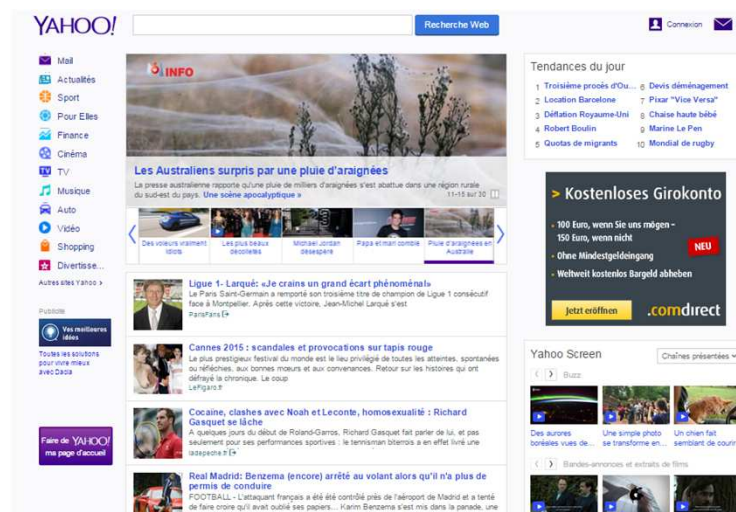

Search engines are driving most of their search revenue from sponsored links and display advertising but do not host content

Technical intermediaries – Search engines

FINAL VERSION

Google Search
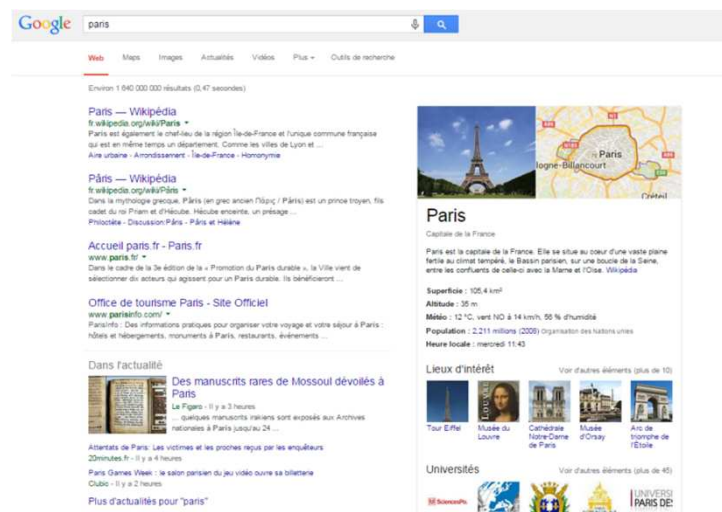

Yahoo!

> Revenue model is primarily based on:
  – **Sponsored links**
  – Display advertising
> No, or very limited (snippets, thumbnails) "on-site" content, but linking to almost all available content

Publisher-based content aggregators offer indexing and streaming of cultural content without paying compensation to right holders

Technical intermediaries – Content aggregators – Publisher-based content interface

FINAL VERSION

1 **Who are they?**

> Indexing and streaming service of publication-based content interface online (radio networks, radio stations, TV, …)

tunein   **iHeart RADIO**

> With over 100,000 real radio stations and 4 million on-demand programs and podcasts available in ~230 countries, Tunein has become the leading radio hub for customers

---

> Publisher-based content interfaces typically generate revenue through **display ads** and **commissions** (potentially paying apps)
> Hence, revenue is mainly driven by **available inventory** and **valuation** of inventory
> Key success factors for revenue generation include:
  – **Breadth** of **content range**
  – **Ads format** and **fill rate**
  – **Usage quality** and **customer stickiness**

3 **How do they generate revenue?**

2 **What kind of relationships with other players?**

Agreements with right holders?	Inclusion in scope?
~	✓

> **Benefit from cultural content** hosted on legal platforms **without paying any compensation to right holders**

> Websites **revenue model** directly linked to cultural content **distribution: indexation of** musical and video **content from hosting websites or editors website**

➡ Become very substantial **content** and **traffic hubs in place of traditional content editors (eg. radio)**

4 **Why are they important?**

Redirection platforms index video and audio content hosted on public cloud platforms

Technical intermediaries – Content aggregators – Redirection platforms

FINAL VERSION

1 **Who are they?**

> Indexing service of video/ audio content from public cloud services with commitment to enter a relationship with right owners

2 **What kind of relationships with other players?**

Agreements with right holders?	Inclusion in scope?
✖	✔

> **Benefit from cultural content** hosted on legal platforms **without paying compensation to right holders**

> Redirection platforms typically generate revenue through **display ads** and **commissions**

> Hence, revenue is mainly driven by **available inventory** and **valuation** of inventory

> Key success factors for revenue generation include:
– **Breadth** of **content range**
– **Ads format** and **fill rate**
– **Usage quality** and **customer stickiness**

> Websites **revenue model** directly linked to cultural content **distribution: indexation of** musical and video **content from hosting websites or editors website**

> Could become crucial intermediary players centralizing much user traffic thanks to the richness and diversity of the content they have aggregated on their platforms

3 **How do they generate revenue?**

4 **Why are they important?**

P2P portals and redirection platforms index mostly ripped cultural content with no compensation to right holders

Technical intermediaries – Content aggregators – P2P & Redirection platforms

FINAL VERSION

1 Who are they?

> Indexation services of peer-to-peer content sharing (each peer is both user and host) and indexing service of video/audio content with no commitment to enter a relationship with right owners

> In 2014, P2P portals and redirection platforms generated **~EUR 23 m in revenue** with an **operating margin of ~85% in 2013**

> Publisher-based content interfaces typically generate revenue through **display ads**, **sponsored links** and **specific actions**

> Hence, revenue is mainly driven by **available inventory** and **valuation** of inventory

> Key success factors for revenue generation include:
  – **Breadth** of **content range**
  – **Ads format** and **fill rate**
  – **Usage quality** and **customer stickiness**

3 How do they generate revenue?

2 What kind of relationships with other players?

Agreements with right holders?	Inclusion in scope?
✖	✔

> **Benefit from cultural content** shared **illegally**, with **no compensation** to right holders

> Websites directly linked to cultural content **distribution: indexation of** musical and video **content from hosting websites or editors website**

> P2P Portals and redirection platforms may be responsible for a **substantial shortfall** for the other players in the cultural content industry and right holders (~EUR 1,900 m additional annual rights to be gathered in the event of the full legalization of all piracy usages)

4 Why are they important?

Detailed analysis in the study; Due to the very large number of players with numerous specificities, this category was considered as a whole when analyzing its revenue model

Content aggregators – Publisher-based, redirection platforms or P2P portals – mostly generate revenue through advertising and commissions

Technical intermediaries – Content aggregators – Redirection platforms

Published-based content interface Tunein
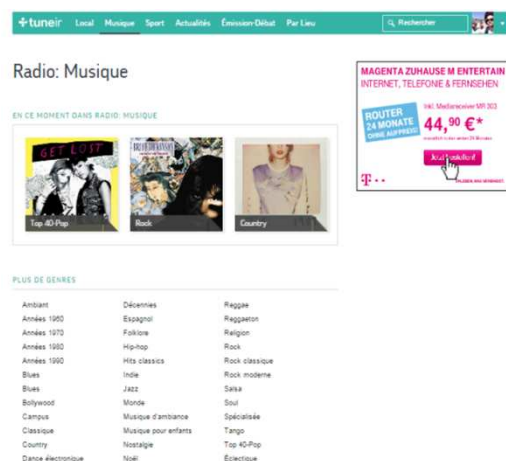

Redirection platform 8 Tracks

P2P Portal Pirate Bay

> Revenue model is primarily based on:
> – **Display advertising**
> – **Commissions**

FINAL VERSION

Social networks as well generate most of their revenue from advertising and sponsored links, benefiting from shared cultural content
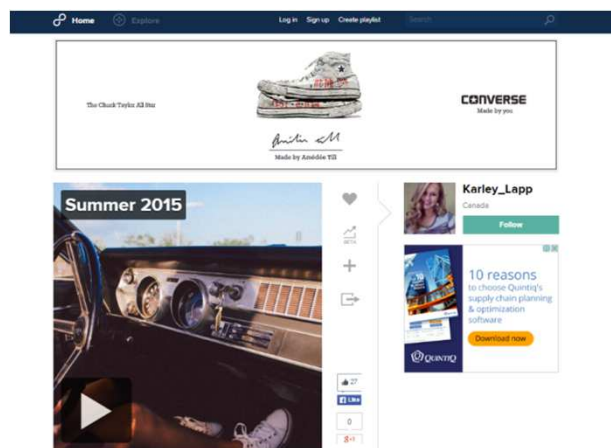

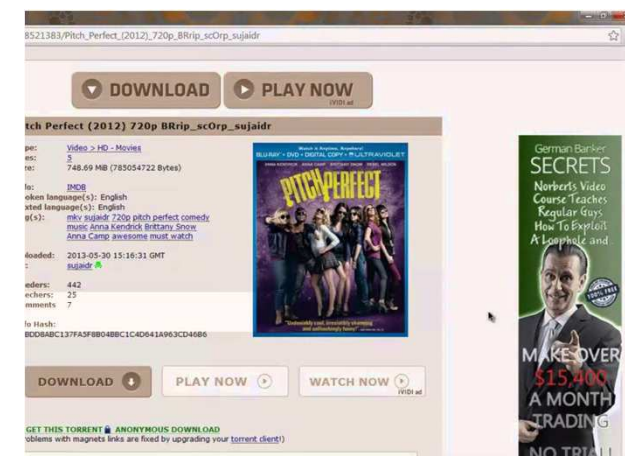

Technical intermediaries – Social networks

1 **Who are they?**

> Internet-based interactive applications enabling users to create, share or exchange all types of content (incl. UGC[1] as well as cultural content)

facebook. twitter +g Pinterest Instagram studiVZ
Linkedin tumblr. viadeo flickr Skyrock Blogger

> On average, Facebook generates ~1 billion search requests WW
> Cultural content is estimated at ~10% of total content published on Facebook

---

> Social networks typically generate revenue through **native advertising**, **display ads** and **sponsored links**

> Revenue is mainly driven by **available inventory** and **valuation** of inventory

> Key success factors for revenue generation include:
– **Virality (Tribe effect)** and **customer stickiness**
– **Customer targeting**, **ubiquity for advertisers**, **ads format** and **fill rate**

3 **How do they generate revenue?**

2 **What kind of relationships with other players?**

Agreements with right holders?	Inclusion in scope?
✖	✔ [2]

> May benefit from casting **cultural content shared** by users often at no cost

> By gathering **all types of user-generated content as well as embedded content from public-cloud companies**, **social networks** have proved to be moving constantly at the **centre of most customers' online usage**

> **The potential for growth remains important** as more and more players consider social networks as efficient media to reach the largest audience

4 **Why are they important?**

1) User Generated Content   2) Professional networks out of scope since their revenue is not directly linked to cultural content

Social networks generate most of their revenue from display and native advertising; content may be hosted or played on-site

Technical intermediaries – Social networks

FINAL VERSION

Facebook

Twitter
> Revenue model is primarily based on **advertising**:
  – **Native**
  – **Display**
> **On-site** / "in-app" **player** for some content

> Revenue model is primarily based on **advertising** related to:
  – **Promoted** tweets
  – Promoted accounts
  – Promoted trends
> Content may be played on a **private browser**

Source: Facebook, Twitter, Roland Berger analysis

Distant lockers usage has recently soared thanks to internet / IT giants' cloud services development

Technical intermediaries –Cloud Services – Lockers

FINAL VERSION

1 Who are they?

> **Personal lockers**
  – Hosting services allowing users to upload personal content to a cloud so that it may be accessed or shared from multiple devices

box iCloud Dropbox amazon cloud drive Google Drive OneDrive SPIDEROAK

> On average, 10% of Box customers pay a subscription
> Cultural content accounts for less than 5% of Box premium storage

> Personal lockers typically generate revenue through a **freemium model** combining a **subscription-based paying offer depending on storage capacity level and** a **free offer**

> Revenue is mainly driven by **#users** and **usage levels**

> Key success factors for revenue generation include:
  – **Usage quality**
  – **Large size content storage/ sharing need**
  – **Price competitiveness**

3 How do they generate revenue?

2 What kind of relationships with other players?

Agreements with right holders?	Inclusion in scope?
✘	✔

> May benefit from **cultural content stored and shared online** by their subscribers

> Various storage capacity allowing the user to **store any media content** (personal and public content) **regardless of content type**

> By making content available from any device, enhance accumulation on the cloud of cultural content at no cost

## **4** Why are they important?

Lockers rely on a freemium model based on desired storage capacity; they are pure storage services, without embedded players

Technical intermediaries –Cloud Services – Lockers

Box

iCloud
> Revenue model is primarily based on a freemium model and **subscriptions**
  – Premium users who want to extend their online storage capacity

FINAL VERSION

Public Video/Audio Platforms give streamed access – mostly free, ads paid – to either UGC or cultural content to their customers

Technical intermediaries –Cloud Services – Public video/ audio platforms

FINAL VERSION

1 Who are they?

> Online content distribution services based on content created by users and copyrighted content (online/streaming based)

> YouTube reported ~1bn users in 2014 and has paid over USD 1bn to right holders since 2007
> Both YouTube and Soundcloud display ~20% of cultural content (i.e. non pure-UGC)

> Public video/audio platforms typically generate revenue through **display advertising**

> Revenue is mainly driven by **available inventory** and **valuation** of inventory

> Key success factors for revenue generation include:
  – **# free users (audience)**
  – **Content range thoroughness and quality**
  – **Customer targeting**, **ubiquity for advertisers** and **ads relevance**
  – **Usage quality**

3 How do they generate revenue?

2 What kind of relationships with other players?

Agreements with right holders?	Inclusion in scope?
✗ ✓	✓

> Despite paying revenue share to some right holders, public video/audio platforms host a **significant share** of **cultural content on which they do not pay compensation to right holders**

> Represent the **leading video and audio services** alongside with OTT services

4 Why are they important?

Public Video/Audio Platforms are player-based services

Technical intermediaries –Cloud Services – Public video/ audio platforms

FINAL VERSION

YouTube
Soundcloud
> Revenue model is primarily based on **advertising**:
  – **In-stream**
  – **In-display**

> Revenue model is primarily based on **subscriptions**:
  – **Premium users** who want to **upload** their own musical content (historically promotional purpose)

The overall EU value gap yields from a bottom-up and segmented approach

Methodology

FINAL VERSION

1. **Analysis of the Value Chain and identification of key players per typology**

2. **Assessment for main players, of the share of revenue directly and indirectly generated / due to cultural content**

ILLUSTRATIVE

Direct

Total revenues

Direct : revenue generated from the direct **monetization and direct commerce** of cultural content or related advertising inventory
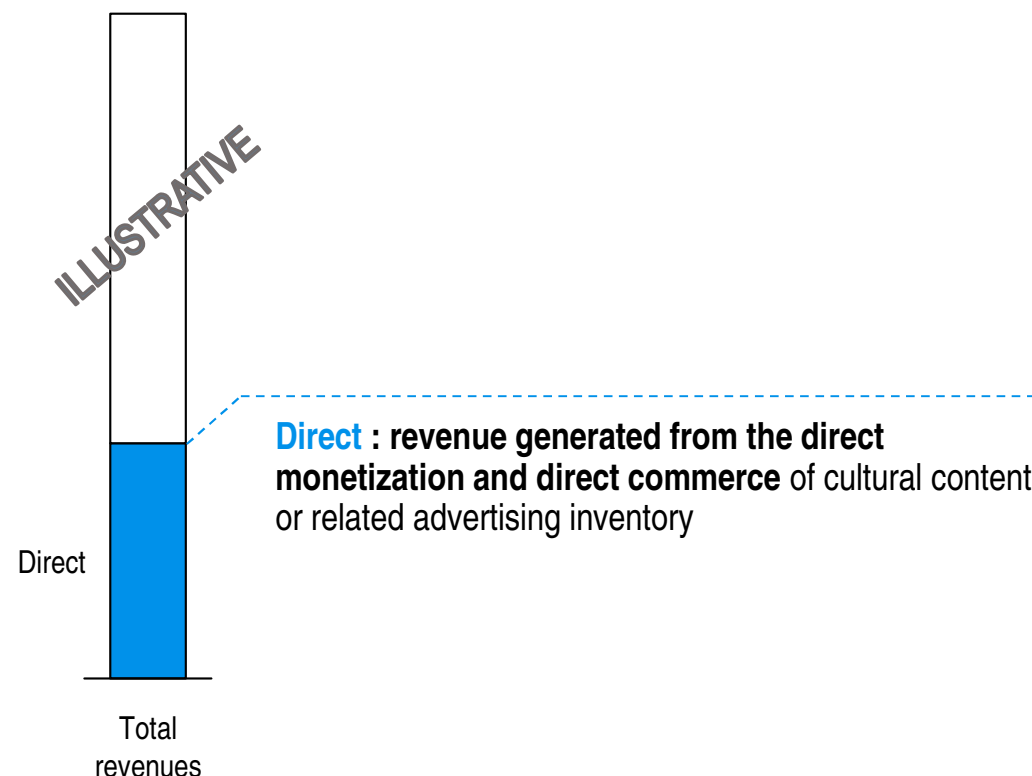

3. **Extrapolation of the results to build the European picture**

> **Extrapolate** data either for an **industry** (eg music) or to a given **typology** of players (eg search engine)

> **Example** : Google has 96% of market share (# users in EU, 2014), which easily provides a reliable picture of search engines

Content direct contribution to revenue generation can be assessed as well as implicit contribution to value creation

Content direct impact on value creation

Approach for revenue generation: direct

Implicit value creation mechanisms

FINAL VERSION

ASSESSMENT

Lever 2

... → xx xx

... → xx xx

Content contribution to revenue generation

QUALITATIVE AND QUANTITATIVE

Is it a main lever in player X business model ?   **Role of content**

> Market capitalization
> Market share
> Share of wallet
> Brand image

> Better understanding of users and needs
> Customer data monetization
> Machine learning

Exemple

Contribution to long term value creation

ASSESSMENT

QUALITATIVE

Overall value creation driven by cultural content

Key success factors of technical intermediaries – Glossary

FINAL VERSION

Key success factor	Definition
Usage quality	Quality of the customer experience on the players' website/application (Ergonomics, streaming speed, …)
Content range	Breath and depth of the range of cultural content proposed
Content quality	Quality of the range of content offered
Customer targeting	Ability to enhance customer monetization through a better understanding of its needs
Customer stickiness	Loyalty / likeliness of the consumer to use a service on a regular basis
Price competitiveness	Competitiveness of the offer's price compared to its competitors
Ubiquity for advertisers	Ability for an advertiser to be present for multiple targeted customers, on multiple website and devices at the same time
Ads relevance	Relevance of an ad in the eye of the targeted customer, based on its habits and tastes
Virality (Tribe effect)	Propensity of an offer to generate strong adherence from consumers

Key success factor	Definition
Ads format	Size and location of ads allowing players to monetize a large inventory
Fill rate	Measure of inventory effectiveness at meeting demand
Competition (RTB)	Existence of a competitive environment (Real-time bidding for example) allowing the player to optimize the revenue of its advertising space
Large size content storage/ sharing need	Propensity of targeted consumers to necessitate a large size of content storage
Storage capacity	Cultural content storage capacity offered by a player to its subscribers in the frame of a free or paying service

Others	Definition
Freemium	Tiered service model, with an ad-supported free offer and a paying premium offer
KSF	Key Success Factor
KPI	Key Performance Indicator
CPC	Cot per Click (for ads)

Passive and declarative studies were conducted by specialized agencies in order to understand usages on Facebook and Google

Methodology for Cultural Contents usage identification in Usage Studies

	Market research company	Type	Process	Period
Search Engines Google	mediametrie // NetRatings + Sépage	Passive study	> Constitute a representative **panel** of users and **track** their search journeys > **Scrap** data from all clicked Web pages > Analyze data thanks to **Semantic Web** (after a Machine Learning phase) > Identify destinations	**France:** Week 4 - Week 8 of 2015 (**February 2015**) **Italy:** Week 9 - Week 13 of 2015 (**March 2015**)
Social Media facebook.	Ipsos	Declarative study	> Draw up a **questionnaire** to address to Facebook's **Active users** > Collect **usage data** from the **panel** (Publish/Share, Open, Comment & Like) > Analyze results through **cross tabulations** > Identify actions and consumptions	**France:** Week 14 of 2015 (**March-April 2015**) **Italy:** Week 14 of 2015 (**June 2015**)

4 usage types and 11 categories of cultural contents were identified

Definition of different usage types and categories of cultural contents

FINAL VERSION

Search Engines

Google

Social Media

facebook.

Usage types considered in surveys

> **Access:** digital works downloads and streaming

> **E-commerce**: physical goods e-commerce and ticketing

> **Social**: interactions via social media and forums

> **Other**: encyclopedia and other information, illicit contents

> **All previous items**
> For **Access** only**:** Digital works downloads and streaming, licit and illicit alike (the questionnaire did not distinguish between licit and illicit contents)
> **4 types of actions** considered :
  – Open
  – Post/Share
  – Comment
  – Click on "Like" button

Categories of cultural contents

✓ Press   ✓ Books

✓ Music   ✓ Live (incl. Music)

✓ Radio   ✓ TV

✓ Cinema   ✓ Video Games

✓ Visual Arts (incl. Architecture)

✓ All previous items

✓ Advertising

✓ Internet videos

The share of Cultural Content in the activity of Google users has been measured via the automatic qualifications of a tailored algorithm

Passive Study Methodology on Search Engines

Google

FINAL VERSION

Objectives	Details
1. Constitute a representative **panel** of users and **track** their search journeys: panels of 2 x 2,000 Search Engines users (FR/IT)	mediametrie // NetRatings nielsen
2. **Scrap** relevant data (title, text, media) from all clicked Web pages	**C. Grand**
3. Analyze data thanks to **Semantic Web**	Sépage

3. Analyze data thanks to **Semantic Web**

> **Gold Standard**: leverage human natural knowledge to qualify usage data:
  – 10 experts from different fields in France, 4 in Italy
  – Panel of 2 x 150 Search Engines users (FR/IT)
  – 5,955 lines of qualified data in France, 3,000 lines in Italy

> **Machine Learning:** develop algorithms to match Gold Standard results (at the level of Cultural Contents)

> **API (Application Programming Interface)**: apply the algorithms to a much larger sample of usage, towards Big Data…: 72,818 lines of qualified data in France, 141,537 in Italy

Roland Berger
Strategy Consultants

A three-step method was implemented to determine the share of Cultural Content in the daily activity of Facebook's active users

Declarative Study Methodology on Social Media

facebook.

Objectives	Details
1. **Draw up the questionnaire** > Determine the profile of "**active users**" and assess their proportion + Test the **questionnaire**	> **1 008 Online** interviews + **12 qualitative** interviews in **France**, **1,084 Online** interviews in **Italy**, of people representative of the population (aged from 16 to 75)
2. **Collect data from the panel** > Recruit at least **1 000 participants** corresponding to the profile and willing to complete the questionnaire	> **Active users** must connect to Facebook at least once during the week and make at least one action
3. **Analyze the results** > Recover participants' **daily log books** (Facebook activity reports) then compile and analyze it (cross-tabs)	> Out of the 1 000 recruited participants in **France**, **670** filled in their reports at least **once a week** and **370 every day** of the week > Out of the 2 000 recruited participants in **Italy**, **1,573** filled in their reports at least **once a week** and **1,120 every day** of the week

Contents

Licensed digital content distributors are the reference channel for digital distribution - ~70% of gross revenue is spent on content

> Licensed digital content distributors are of importance as they tend to stand as the **reference channel for content distribution**, being for example for music (Spotify) or video (Netflix)

> Licensed digital content distributors include both **pure online players** (Spotify) and players that successfully **achieved a digital transformation**, as illustrated by Netflix which historical activity (DVD rentals) accounts for less than 15% of revenue as of today

> Cultural content is therefore both the basis and the core of their Business Model and is a key factor to retain customers – **100% of their value and revenue are based on distributed cultural content**

> **Players are now strongly challenged** in the new environment, as illustrated by the current shake-up taking place between record companies, cultural content e-shops and rip-based content aggregators / content hosts (e.g. Grooveshark shutdown in may 2015)

> Value creation mechanism can differ from one player to other:

A **Spotify – freemium model – Average royalty repayment of 70% of gross revenue**

  – 9% of revenue is generated by advertising to "free" users; those represent 2/3 of the customer base and have a negative average net revenue per user (ARPU, after royalties)

  – 91% of revenue is generated by premium users fees; those represent 1/3 of the customer base and generate a net ARPU of ~42.7 EUR per year (after royalties)

  – Overall, Spotify generates an average annual net revenue per user of 5.1 EUR (after royalties)[1]

B **Netflix – subscription-based model – Average content acquisition cost of 73% of gross revenue**

  – 100% of Netflix revenue is generated by subscriptions (DVD rental and video streaming)

  – 86% of revenue is generated by video streaming, which is used by 89% of the customer base (gross ARPU of 62 EUR)

  – Overall, the website generates an average annual net revenue per subscriber of 16.6 EUR per user

1) *This figure is based on blended approach of free and paid streams. It is to be noted that the business model mainly relies on the subscription model, which is more likely to be the proxy when comparing with the completely free streaming services undertaken by the "technical intermediaries" analysed in this report*

FINAL VERSION

Players are now strongly challenged in the battle over music industry economics

Digital music ecosystem – Key stakes

FINAL VERSION

Groveshark close in May 2015 following juridical disputes with majors

Groveshark

Pressure to close illegal websites

Music labels

Pressure on fees

Pressure to stop partnering with freemium players

Apple is currently pressuring on majors to force freemium services to end partnerships with freemium services

Labels are threatening Apple new music service (iTunes + Beats) to end partnerships if they do not raise subscriptions prices

Illegal music services

Pressure to encourage users to pay

$

Paying music services

Jay-Z accuses "big companies" to spent millions to denigrate its new music service Tidal

TIDAL

Freemium services

Universal is currently pressuring Spotify to differentiate its premium and free offers in order to encourage users to subscribe to paying offer

UNIVERSAL MUSIC Spotify

Spotify and Netflix are benchmark as OTT content distributors due to their role model in commercial music and video digital streaming

Benchmarking rationales

FINAL VERSION

A Spotify®

> Global **leader in music streaming** service

> **Freemium model** combining ad-based and subscription-based revenue sources

> **Agreements with right holders**

> **Absence of pirated content**

> **7 funding rounds since the creation of the company,** for a total amount of USD 538 m, new round in progress for USD 350 m

B NETFLIX

> Global **leader in video streaming** service

> Example of paradigm change management: switch from historical **video content physical rental to cloud-based video content streaming**

> Exclusive **subscription-based revenue source**

> **Absence of traffic-driven performance indicators** (no advertising)

> **Absence of pirated content**

> Pioneer of **original content production** as a content distribution pure-player (ex: House of cards)

Spotify and Netflix KPI can be used when necessary as proxies for similar services but "rip-based" free platforms

OTT players compete with traditional content distributors and managed networks with an IP-based on-demand content offer to their customers

Licensed digital content distributors description: OTT services

REFERENCE LEGAL CHANNEL FOR CULTURAL CONTENT STREAMING DISTRIBUTION

FINAL VERSION

Who are they?

Subscription-based	E-commerce
Spotify	amazon fnac
NETFLIX	iTunes
DEEZER	Google play
Players in # of users [Global; millions; 2014]

Spotify: 45 | 15 **60**

Page

Beyond revenues, all intermediaries benefit from the impact of cultural content on implicit and collateral value creation

Importance of cultural content in other mechanisms of value creation

FINAL VERSION

Importance of cultural content in implicit value creation

Rationale

Search engines
Google

Low — High

> The **relevance and exhaustiveness** of search results will impact the **relative performance** of players like Google, with **direct consequences** on market **capitalization** / share, brand **image**, or better **understanding** of users and needs

Content aggregators
tunein

> Cultural content is at the **heart of players** business like TuneIn, with content **range** and **quality** impacting mostly the **market share** and **brand image**

Social Media
facebook. twitter

> Cultural content has an impact on customer **stickiness** and therefore **market capitalization**, but it also **impacts heavily** the **understanding** of users and needs when the content is **shared**, **liked** or **commented**

Public clouds and platforms
You Tube box Grooveshark

> Public platforms benefit mostly but strongly from **the collateral effect of direct value creation** on sites embedding content from public cloud services

No matter the profile, or size, or business model of analysed players , they all benefit – beyond revenues – from cultural content in terms of implicit and collateral value creation

Roland Berger
Strategy Consultants

The direct European cultural content value differ from one intermediary typology to the other – overall several billions at stake

Overview of technical intermediaries – [Cultural content in Europe; EUR m ; %][1]

4.1 Search engines

Among search engines, Google has a near monopoly in Europe, driving most of its search revenue from sponsored links

Technical intermediaries description – Search engines

FINAL VERSION

Who are they?

Google™   **bing**

DuckDuckGo

YAHOO!   **Qwant**

Market share [Europe; 2014; users]
96%

3%   2%   0%

Google   Bing   Yahoo   Others

Why are they important?

Google Deutschland

> Internet navigation **main tool**
> **Frequent entry point** to any destination on the web
> **Directing towards cultural contents** published:
  – by right-holders (e.g. blogs)
  – on "legal" platforms (e.g. YouTube)
  – elsewhere (e.g. Facebook, but also illegal platforms)

How do they generate revenue?

Main revenue generation approach

> Sponsored links

Main revenue generation levers

> Available inventory
> Valuation of the inventory

Cultural content contributed ~65% to the 2014 European search market (EUR 10.5 bn), out of which ~18% directly (EUR 3 bn)

Europe – Extrapolation of Google analysis on the search market

Google

FINAL VERSION

Methodology – Volume market share

> **European search revenue** coming directly and indirectly **from cultural content** was analyzed **based on Google revenue and user market share** analyses

> **Google** had a **96% market share** in terms of **users** in Europe in 2014

> Assumption of **similar search and revenue breakdown to Google's for other players** (e.g. Yahoo!, Bing, Qwant, etc.)

> Assumption on **other players' monetization capacity: 50% of Google's**

Results

Google $\longrightarrow$ **Europe**

$\sum$ = EUR 15.5 bn $\sum$ = EUR 16.1 bn

Content strongly contributes to search engines revenue model thanks to their availability on the net and ability to be indexed

Content role in Search engines business model[1]

FINAL VERSION

Revenue model

Key Success Factors

Qualitative estimate of the role of content

Google

Revenue = ⊗
- # clicks — ⊗
  - # sponsored links displayed — ⊗
    - # searches — ⊗
      - # users
      - # searches / user
    - Fill rate[4]
  - CTR[3]
- CPC[2]

Customer stickiness Thoroughness Relevance — **HIGH**
Cultural content contributes to overall thoroughness and relevance
This entails stickiness by providing exhaustive and relevant answers to users

Ubiquity for advertisers — **LOW**
Ads relevance — **LOW**
Cultural content does not have a direct impact on ubiquity for advertisers and ads relevance

Customer targeting (ROI for advertisers) Ubiquity for adv. (Bidding intensity) — **HIGH**
Users' online behaviors with respect to cultural content
> provide information regarding their needs
> contribute to develop their consumption profiles
> enable monetization through targeted advertising solutions

▼
KSF also drive indirect (market capitalization, brand image, …) and implicit (machine learning, users understanding, …) value creation

1) Limited to the search function and excluding other search engines revenue sources
2) Cost Per Click: price paid by advertiser per sponsored link clicked by user
3) Click Through Rate: number of click per sponsored link
4) Average number of sponsored links per search

Cultural content generates other value creation upsides, particularly through market share and brand image reinforcement

Cultural content role in implicit and collateral value creation – Search engines **Google**

FINAL VERSION

	Value creation drivers	Key Success Factors	Cultural content impact	Rationale
Implicit	Market capitalization	Ubiquity for users and advertisers	◕	> It is key for search engines to provide the most exhaustive and relevant content in their answers and results to users
	Market share	Thoroughness/ Relevance	◕	
	Share of wallet	Ubiquity for advertisers	◔	> Cultural content (~30% of search) highly contributes to a good performance as compared to competitors'
	Brand image	Customer stickiness	◕	
				> This performance then improves brand image, increase market share and thus drive market capitalization
	Better understanding of users and needs	Thoroughness/ Relevance	◐	> Users' online behaviors relating cultural content contributes to helping search engines analyze users' profiles and needs
	Customer data monetization	Customer targeting	◔	> Then search engines can improve content thoroughness/relevance accordingly
	Machine learning	Customer stickiness	◔	> Customer stickiness should increase as well
Collateral	Direct value creation on sites embedding content from public cloud services		○	

➔ **Very high contribution but no barriers to entry**

Implicit value creation allows Google to maintain its near-monopoly situation, despite low switching costs for users and advertisers

4.2 Content aggregators

Content aggregators are made of publisher-based content interface, redirection platforms and P2P portals

Technical intermediaries description – Content aggregators

FINAL VERSION

Who are they?

Publisher-based content interface

Highly comparable

Redirection platforms

Illegal – P2P portals and Redirection platforms

Why are they important?
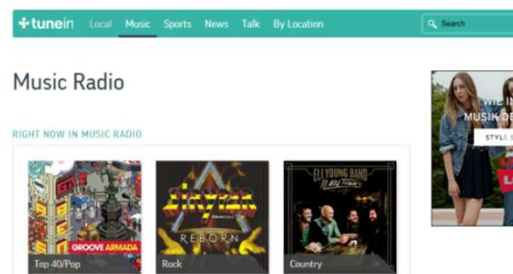

> **Websites revenue model directly linked to cultural content distribution** => **Indexation of musical and video content** from hosting websites or editors websites

> Publisher-based content interfaces and Redirection platforms **benefit from cultural content hosted on legal platforms** with no compensation to right holders

> P2P portals and Redirection platforms benefit from cultural content often shared illegally, with no compensation to right holders

How do they generate revenue?

Main revenue generation approach

> Display ads

Main revenue generation levers

> Available inventory
> Valuation of the inventory

Cultural content contributed ~85% to the 2014 online music aggregation service market (i.e. EUR 85 m)

Europe – Extrapolation of Tunein analysis on the online aggregation music service market

FINAL VERSION

Methodology – Volume market share

> **European content aggregators revenue** impact by directly and indirectly **cultural content** has been estimated **based on Tunein revenue**

> **Tunein market share is assumed of 20% on online music aggregators in 2014**, having a leading position in a however fragmented market

Publisher-based content interface and redirectors are highly comparable, but strongly differ from P2P and rip-based redirection platforms
Content aggregators

A Publisher-based content interface and Redirection platforms: ✦tunein

> **Tunein chosen as the main benchmark for the categories**

> **World's largest audio network** with over 100,000 real radio stations and four million on-demand programs and podcasts

> **Partnerships with broadcasters** to offer cultural content to listeners (CBS, NPR, …)

> **Free website and application**

> Revenue model based on **display advertising**

> Raised **over USD 47 m in venture funding** in 2012 and 2013

B P2P portals and rip-based redirection platforms : General Overview

> **P2P portals** generate more revenue (through advertising) than the other "rip-based" segments, as they represent **2/3 of "rip-based" content aggregators revenue**

> **Low barriers to entry** for redirection platforms results in a multitude of small sites (40% of redirection platforms)

> **Redirection platforms** accounts for **1/3 of "rip-based" content aggregators revenue**

> Despite P2P portals and redirection platforms' notoriety as sources of illegally shared content, **premium brand ads** frequently appear on these websites (13% on large portals, 29% of large redirection platforms)

Cultural content (radio/music for Tunein) is at the heart of Publisher-based content interface and Redirection platforms value proposition

4.3 Social networks

Social networks in Europe are in an oligopolistic situation, with vertical specialists (social, professional, information, photography, etc.)

Technical intermediaries description – Social networks

FINAL VERSION

Who are they?

Penetration of leading social networks
[Europe; 2013; % of respondents]

	58%	22%	13%
	Facebook	Google+	Twitter
Why are they important?

> Personal / public content sharing with the public or the private sphere
> Displaying content from various sources :
  – User generated content
  – Embedded content from public clouds companies

How do they generate revenue?

Main revenue generation approach
> Native advertising
> Sponsored links
> Display ads

Main revenue generation levers
> Available inventory
> Valuation of the inventory

Cultural content contributed ~70% to the 2014 European social network market (i.e. EUR 2 bn), out of which ~43% directly

Europe – Extrapolation of Facebook analysis on the social network market

Methodology – Value market share

> **European social network revenue** coming directly and indirectly **from cultural content** was analyzed **based on Facebook advertising revenue** and **share of social network ad spending** (in value)

> **Social network ad spending[1]** totaled **EUR 3.2 bn** in Europe in 2014

> Hence, with advertising revenue of EUR 2.5 bn, **Facebook share in value amounted to ~78% in 2014**

> In comparison, Twitter share in value amounted to ~8% in 2014, which is consistent with penetration figures in Europe

1) Excluding professional social networks (LinkedIn and Viadeo)

Segment Description

1 > LinkedIn provides **various services** to address the needs of **business users**, **recruiters**, **unemployed** users and **sales professionals**

2 > **LinkedIn advertisers pay-per-click** through **targeted ads** based on profile criteria

3 > **Recruiters** and **corporates** pay for:
– **Branded corporate page**
– Pay-per-click through targeted **Job ads**
– Access to the **database** of LinkedIn users and resumes

1 > **Recruiters and corporations pay for:**
– **Job offers**
– Access to the **member database** via a specialized interface to meet recruiters' requirements
– **"Employer Brand"** **communication products**

2 > **Recruiters** and **corporations** pay for **global communication campaigns** of advertising products

3 > Viadeo users pay for a **premium subscription**, providing a broader range of features

Impact of cultural content on revenue

> LinkedIn and Viadeo **revenue** are **not directly linked to cultural content**
> **Customer adherence** can **indirectly** be linked to a small extent to the **presence of news in the feed**

Focus is on two leading social network examples: Facebook and Twitter

Social networks – Overview of main players

A **facebook.**

> Global **leader in online social network** services
> Displays **various types of content** (photo, video, music, press, etc.)
> The share of **cultural content** is estimated at **51% of total content** in 2015 and mainly consists in vide games, music and visual art
> **Revenue model** is primarily based on **advertising**: **native** and **display**
> Cultural content has both **direct** and **indirect impact** on **Facebook revenue** – other value creation levers exist

B **twitter**

> Global leading **social network** based on **short messages**
> Displays **various types of content** (photo, video, music, press, etc.)
> The share of **cultural content** is estimated at **75% of total content** in 2015 and mainly consists in embedded content from music/video platforms as well as in artists photographs and paintings, etc.
> **Revenue model** is primarily based on **advertising** related to **promoted tweets**, **accounts** and **trends**
> Cultural content has both **direct** and **indirect impact** on **Twitter revenue** – other value creation levers exist

Facebook and Twitter KPIs can be used when necessary as proxies for non-documented platforms

Contents may be seen as "fuel" for Social networks thus significantly contributing to revenue generation

Cultural content helps social networks understanding their users expectations and thus better monetize their consumption profiles

facebook.

Cultural content role in implicit and collateral value creation – Social networks
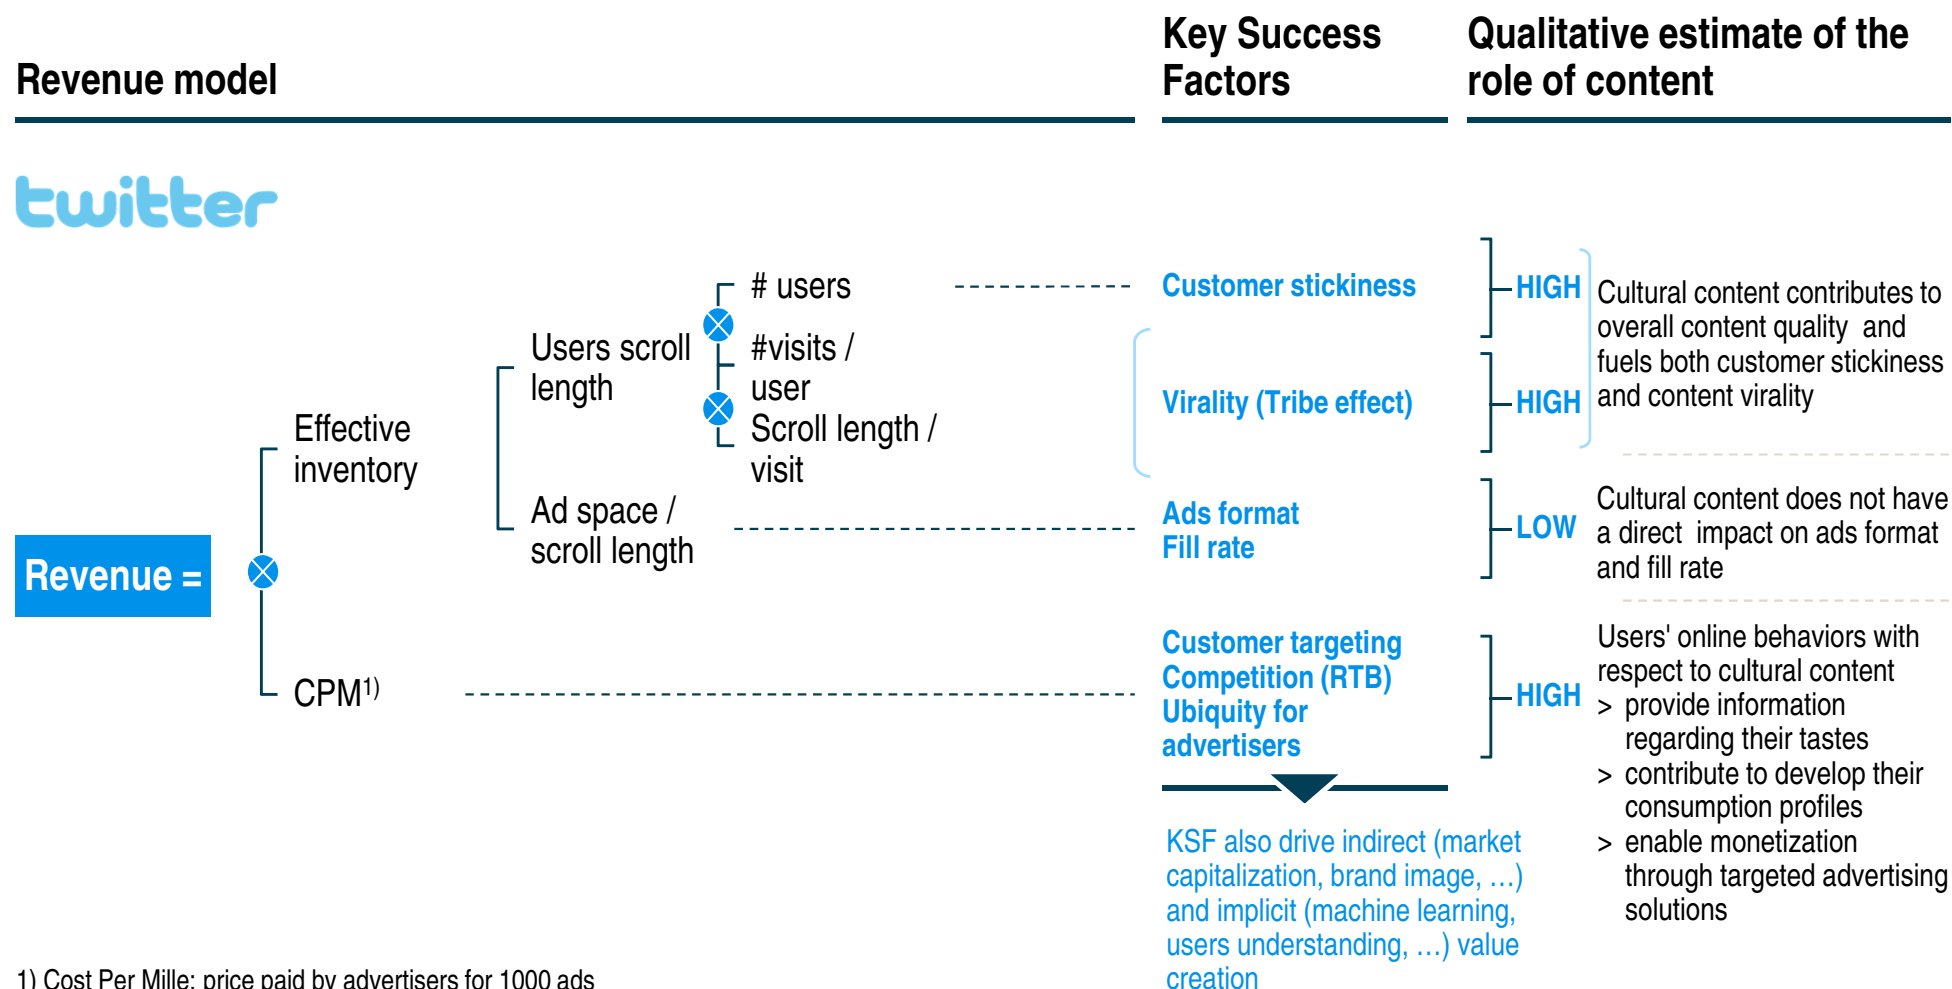

FINAL VERSION

	Value creation drivers	Key Success Factors	Cultural content impact	Rationale
Implicit	Market capitalization	Customer stickiness	◑	> By nature, Facebook enables users to **share cultural content** in a viral way through the "like" or "share" features
	Market share	Virality – Tribe effect	◑	
	Share of wallet	Ubiquity for advertisers	◔	> **Sharing** and consuming **cultural content directly contributes to the users experience** of Facebook as a social media
	Brand image	Customer stickiness	○	
	Better understanding of users and needs	Content range	●	> Thus, cultural content contributes to **increase** Facebook **users' stickiness**
	Customer data monetization	Customer targeting	◑	> When **cultural content is shared, liked or even only commented** by users, Facebook gathers and analyze data that will enable to understand users' tastes and needs, develop their consumption profiles and then monetize them through targeted advertising solutions
	Machine learning	Customer stickiness	◔	
Collateral	Direct value creation on sites embedding content from public cloud services		○	

➜ **High contribution**

Contents may be seen as "fuel" for Twitter thus significantly contributing to revenue generation

Content role in Social network business model

FINAL VERSION

Revenue model	Key Success Factors	Qualitative estimate of the role of content

twitter

Revenue = Effective inventory ⊗ CPM[1]

Effective inventory = Users scroll length ⊗ Ad space / scroll length

Users scroll length = # users ⊗ #visits / user ⊗ Scroll length / visit

Customer stickiness ······ # users — **HIGH** Cultural content contributes to overall content quality and fuels both customer stickiness and content virality

Virality (Tribe effect) — **HIGH**

Ads format Fill rate — **LOW** Cultural content does not have a direct impact on ads format and fill rate

Customer targeting Competition (RTB) Ubiquity for advertisers — **HIGH** Users' online behaviors with respect to cultural content
> provide information regarding their tastes
> contribute to develop their consumption profiles
> enable monetization through targeted advertising solutions

▼

KSF also drive indirect (market capitalization, brand image, …) and implicit (machine learning, users understanding, …) value creation
1) Cost Per Mille: price paid by advertisers for 1000 ads

➜ **High contribution**

4.4 Cloud services

Cloud services include lockers (Box), public audio (Souncloud) and video (Youtube) platforms, as well as "rip-based" content players (Grooveshark)

Cloud services

FINAL VERSION

A **Cloud services: Lockers**

> **Booming industry** (23% p.a. CAGR 2013 - 2018 in zettabytes per year)

> Box is **one of the major players** in the cloud industry (USD ~3 bn valuation), allowing online storage and sharing services accessible from multiple devices

> The company **raised USD ~520 million**s before going public on **NYSE on January 2015**

> Formerly Box.net, Box **started on B2B** (business consumers) and has **expanded to personal users**

> Box business model is based on **freemium offer**

B **Cloud services : Public video/ audio platforms**

> Cloud services includes mainstream **public video (Youtube)** and **audio (Soundcloud)** platform (on which content is generally posted by its owners) as well as **"rip-based" content** video/audio platforms (**Grooveshark**)

> **Youtube is the leading online video platform** in the World and is historically based on advertising revenues and is set to launch its paid-for service with ad-free videos and offline watching

> **Soundcloud** is a Swedish **streaming audio platform** enabling its users artists to upload, record, promote and share their originally-created sounds, through premium subscriptions but with no payback

> **Grooveshark is an audio platform** created in 2007 and shut down in May 2015 on which users make their music files available in the cloud. The website has been replicated more than 10 time since its closure
Distant lockers usages have recently soared thanks to internet/ IT giants' cloud services development

Technical intermediaries description –Cloud services: Lockers

Who are they?

US Usage of major cloud locker services
[% of respondents]

27%	17%	16%	10%
iCloud	Dropbox	Amazon Cloud Drive	Google Drive

Why are they important?

> Online storage and sharing services accessible from multiple devices

> Various storage capacity allowing the user to store any media content (personal and public content) regardless of content type

➔ By making content available from any device, enhance accumulation on the cloud of cultural content at no cost

How do they generate revenue?

Main revenue generation approach

> Subscriptions

> Freemium based on storage capacity levels

Main revenue generation levers

> # of users

> usage levels

Source: Roland Berger analysis

Cultural content contributed ~3% to the 2014 European lockers market (i.e. EUR 50 m) – Direct impact only

## Europe – Extrapolation of Box analysis on the lockers market

FINAL VERSION

Methodology – Volume market share

> **European lockers revenue** coming **from cultural content** was analyzed **based on Box subscription revenue**, **premium-to-all user ratio** and **user market share**

> In 2014**, Europe** gathered **224 million locker users**

> Assumption**: Europe locker premium-to-all user ratio** is equal to Box's (**10%**) – *"Almost all users intend to store at low or no cost"* – **22 million locker premium users**

> Hence, Box 2014 premium-user market share in Europe amounted to 6% (1.3/22)

> Over the last months, most players aligned their cost per terabyte to remain competitive: **Box market share in value and in volume are equivalent**
Results

box   →   **Europe**

FINAL VERSION

Who are they?

Most visited video websites
[Global; unique monthly visitors; 2015]

1 000	130	100	14	13
YouTube	Vimeo	Dailymotion	Break	Metacafe
Why are they important?

> Major audio & video platforms, directly competing with paying services
> Free / subscription based audiovisual content distribution services
> Host and distribute content from various sources:
   – published by right-holders
   – published by users

How do they generate revenue?

Main revenue generation approach

> Display

Main revenue generation levers

> Available inventory
> Valuation of the inventory

Source: Alexa, Roland Berger analysis

Cultural content contributed ~92% to the 2014 European public video platforms market (EUR ~775 m), out of which ~66% directly

Europe – Extrapolation of Youtube analysis on the public video platforms – Results

FINAL VERSION
Methodology – Volume market share

> **European public video platforms revenue** coming directly and indirectly **from cultural content** was analyzed **based on Youtube revenue**

> Youtube is estimated to have a **85% share** of monthly unique visitors on the public video platforms market

  – at a stable revenue / user it can be assumed that Youtube accounts for **80%** of video platforms revenue in Europe

  – as the major player on the market, Youtube revenue / user could be higher than other players, Youtube could therefore accounts for **90%** of video platforms revenue in Europe

=> An assumption of **85% of revenue market share** has been adopted for Youtube extrapolation on European public video platform market

Content role in Public video/ audio platforms business model

FINAL VERSION

Revenue model

Key Success Factors

Qualitative estimate of the role of content

Revenue = (In-display advertising revenue + In-stream advertising)

In-display advertising revenue:
- # clicks = # ads displayed × CTR[3]
- CPC[2]

ads displayed = # searches × Fill rate[4]

searches = # users × # searches / user

In-stream advertising:
- # ad views = # users × # ad views / user
- CPV[1]

ad views / user = # video views / user × # ad shown / video view × % full ad views

Key Success Factors:
- Customer stickiness / Thoroughness / Relevance
- Ubiquity for advertisers
- Ads relevance
- Customer targeting (ROI advert.) / Ubiquity for adv. (bidding intens.)
- Usage quality / Content range / Content quality
- Content quality
- Content quality
- Usage quality / Content quality / Ads relevance
- Customer targeting

Qualitative estimate:
- HIGH — Cultural content contributes to overall content quality and variety: it fuels customer stickiness
- LOW
- LOW — Cultural content does not have a direct impact on ubiquity for advertisers and ads relevance
- HIGH — Users' online behaviors with respect to cultural content enable monetization through targeted advertising solutions
- HIGH
- HIGH — Quality of cultural content displayed directly impacts the number of video viewed and therefore the number of ad viewed per users
- HIGH
- HIGH
- LOW

1) Cost Per Video: price paid by the advertiser to use the video as an advertisement vector
2) Cost Per Click: price paid by advertiser per display ad clicked by user
3) Click Through Rate: number of click per display ads
4) Average number of display ads per search

4.5 Private cloud

Internet service providers have developed remote access solutions to cultural content private copies for their customers

Technical intermediaries – Private Cloud: nPVR

FINAL VERSION

Who are they?

Map of nPVR deployment in Europe [2014]

Why are they important?

> TV content record services accessible from multiple devices, stored on operators servers (nPVR) or on a NAS provided by the operators (NAS based DVR)
> Currently with different legislative constraints depending on the country

How do they generate revenue?

Main revenue generation approach

> nDVR option subscription Revenue
> TV subscription

Main revenue generation levers

> # subscribers
> Usage levels

Source: IDATE, Roland Berger analysis

Contents

The impact of cultural content on technical intermediaries revenue generation reaches 62% of their total revenue, to an amount of EUR 13.7 bn for Europe in 2014

Technical intermediaries create value thanks to cultural content in three ways:

> **Direct impact**, through **direct consumption or showcase** of (or monetized direct links to) cultural content (e.g. Google AdWords, in Facebook feed,…)

> **Indirect impact**, thanks to **the service stickiness, usage intensity and usage repetition** that are driven by the abundance of content made available (in other words: what revenue would remain if there was no cultural content made available by the service)

> **Implicit or collateral impact** (qualitative): in a fast-moving, technically complex, **oligopolistic and usage-driven competition**, market leaders derive increased future revenue generation capabilities, consumers knowledge and market valuation from those same **usages that are significantly driven by cultural content**

Source: Roland Berger analysis

The overall EU value gap yields from a bottom-up and segmented approach

Methodology

1. **Analysis of the Value Chain and identification of key players per typology**

2. **Assessment for main players, of the share of revenue directly and indirectly generated / due to cultural content**

**Indirect** : role played by cultural content in the economic model of the player (i.e. **additional revenue that may disappear if not for cultural content**)

> **Is there an unfair / unjustified value gap that needs to be adjusted ?**

Direct : **revenue generated from the direct monetization and direct commerce** of cultural content or related advertising inventory

> **Is it a "normal" commercial deal ?**
> **Is the distribution legal ?**
> **Is there an agreement with right holders ?**
> **Is there a value generation gap ?**

3. **Extrapolation of the results to build the European picture**

> **Extrapolate** data either for an **industry** (eg music) or to a given **typology** of players (eg search engine)

> **Example** : Google has 96% of market share (# users in EU, 2014), which easily provides a reliable picture of search engines

Content direct and indirect contribution to revenue generation can be assessed as well as implicit contribution to value creation

Contribution to long term value creation

ASSESSMENT

QUALITATIVE

Overall value creation driven by cultural content

The impact of cultural content on technical intermediaries revenue generation may reach 62% of their total revenue, to an amount of EUR 13.7 bn for Europe in 2014

Overall **role of cultural content** in revenue generation by Technical Intermediaries is **very significant,** and stands at **EUR 13.7 bn for Europe in 2014, i.e. 62%** of Technical Intermediaries revenue

> Direct impact amounts to EUR 5.0 bn, or 23% of T.I. revenue, while indirect impact reaches EUR 8.7 bn, or 40% of revenue

> **Most of the value creation relates to Search Engines**, in part due to their very large market: for S.E. only, cultural content has an impact of **EUR 10.5 bn on revenue** (65% of the total), and **for Google only, EUR 10.1 bn**. Direct impact reaches 18% of revenue, while **indirect impact reaches 47%**, due to the major role played by cultural content in user stickiness and frequency and depth of usage

> **Social Networks** are the second largest beneficiaries of cultural content-driven revenue generation: **total is above EUR 2.2 bn (70%)** about 43% direct and 28% indirect due to the sheer **quantity of embedded content**, that drives advertising revenue

> **Public platforms** such as YouTube are highly reliant on cultural content, which have an impact on **92% of their revenue (EUR 0.8 bn)**, largely driven by **direct consumption** (66% of their revenue); **Aggregators** are in a similar situation (**85% total impact**, to EUR 0.1 bn, from which 75% direct), while **Lockers** are impacted **only to 3%** of their revenue

> Such figures do not include the "hidden" impact of illegal usages, which are cannibalizing value worth billions of Euros

The direct and indirect European cultural content value differ from one intermediary typology to the other – overall several billions at stake

Overview of technical intermediaries – [Cultural content in Europe; EUR m ; %][1]

Main player identified and analyzed

Europe

Typology and player example		Total Revenue	Direct impact of CC	Indirect impact of CC	Total Impact of CC	Total Market value	Direct impact of CC	Indirect impact of CC	Total Impact of CC
Search engines	Google	15 470	~2 835 (18%)	~7 270 (47%)	~10 105 (65%)	16 140	~2 960	~7 590	~10 550
Content aggregators (music)	tunein	20	~15 (75%)	~2 (10%)	~17 (85%)	100	~75	~10	~85
Social Media	facebook	2 450	~1040 (43%)	~675 (28%)	~1 715 (70%)	3 160	~1 340	~870	~2 210
Lockers	box	100	~3 (3%)	-	~3 (3%)	1 740	~50	-	~50
Public video platforms	YouTube	720	~475 (66%)	~190 (26%)	~665 (92%)	845	~555	~220	~775
TOTAL						21 985	~4 980 (23%)	~8 690 (40%)	~13 670 (62%)

1) All figures rounded from most accurate calculation – hence offsets in sums of figures presented

Methodology (1/5)

FINAL VERSION

Global methodology (1/2)

> **Cultural content** is considered in a broad sense, covering:
>   - Press
>   - Music
>   - Radio
>   - Books
>   - Live art performances (including music)
>   - TV
>   - Cinema
>   - Video Games
>   - Visual Arts (incl. architecture)
>   - Advertising
>   - Internet Videos

> **Usage** covers different types of activities related to cultural content such as access, e-commerce, showcasing and discussing on social media, and describing and providing information around cultural content. Those terms are used in a broad sense, meaning that the usages on the considered site may requiring up to 1 click to access streaming, downloading, buying, discussing,… cultural content (i.e. potentially through another site)

Global methodology (2/2)

> **5 typologies of technical intermediaries** have been considered in the digital ecosystem:
>   - Search engines
>   - Content aggregators
>   - Social media
>   - Personal cloud
>   - Public video platforms

> **One key player** has been picked per typology of intermediaries:
>   - Google for search engines
>   - TuneIn for content aggregators
>   - Facebook for social media
>   - Box for personal cloud
>   - YouTube for public video platform

> **Share of revenue directly (and indirectly) generated** with a role played by cultural contents has been assessed for all these players and a **scale-up of the results** to the full market has been done in order to build the full picture for each type of intermediaries.

Methodology (2/5)

Sources

> All revenues estimates and extrapolation of the results were based on **3 types of sources**:
> - **Publicly available data** from players
> - **4 studies** specifically performed in **France** (Google study in February 2015 and Facebook usage in March-April 2015) and **Italy** (Google study in July 2015 and Facebook usage in August 2015)
> - Usage studies have been run with Nielsen/Médiamétrie and Sépage (search engines, passive study based on semantic machine learning) and with Ipsos (social networks, declarative study)
> - **Other publicly available data** related to usage and markets (including population, households, share of connected population, advertising market data,…)

> **Typology of impact**
Technical intermediaries create value thanks to cultural content in three ways:

> **Direct impact** covers the generation of revenue through direct monetization (such as through advertising enabled by cultural content-generated inventory, or sponsored links directing to sites monetizing cultural content, sale of cultural content,….) or direct commerce of cultural content. *Analogy: if a general retailer stops selling cultural goods, the direct impact would be the revenue lost instantly due the shutdown of this part of its operations*

> **Indirect impact** covers the additional revenue that would disappear if there was no cultural content available to the service, due to impact on service stickiness, usage intensity and usage repetition,… *Analogy: if a general retailer stops selling cultural goods, its customers may shop less frequently, and not go through the whole store in search of cultural goods, thus leading in the medium term to an additional decrease in revenue*

> **Implicit or collateral impact** (qualitative): in a fast-moving, technically complex, oligopolistic and usage-driven competition, market leaders derive increased future revenue generation capabilities, consumers knowledge and market valuation from those same usages that are significantly driven by cultural content. Collateral impact has been assessed qualitatively

> **We consider Direct impact to be more significant than Indirect impact in terms of economics understanding**, as it can be assessed very directly based on usage data, rely on very few hypothesis, and directly represent a material link between revenue generation and usages related to cultural contents

Methodology (3/5)

Estimation of impact on revenues

As 2 impacts were identified, 2 types of calculation were made:

> Revenue generated from the **direct monetization** and **direct commerce** of cultural content or related advertising inventory is considered as direct impact. This impact is very material and can be assessed with rather strong accuracy thanks to a direct identification of the role of cultural content and thanks to usage studies

> Indirect impact is the amount of **additional revenues likely to disappear if cultural content was to disappear** from the web. This impact has been estimated thanks to hypothesis on the evolution of customer usages and is more difficult to assess due to the absence of "like-for-like" examples.

1. Google and the search engine market

> **Google revenue** in a given geography is either a public data or an estimate based on the number of connected inhabitants (and based on the closest available data) and is split in 4 types of revenue: **Google.com and Google network which belong to search engine scope** and YouTube and other revenues considered out of scope. This split is based on worldwide distribution of Google's revenues

> Direct revenues in Google case come from **sponsored links that have been clicked and which lead to sites related to cultural content** (access to press, non-press access, e-commerce, social, and other cultural links): this figure is directly available from usage studies

> For **indirect revenues**, the average of 2 estimates based on 2 methodologies has been used:

– One approach evaluates the share of cultural content (access to press, music, video games, TV…) in natural results; the hypothesis is that in the long term overall revenue would decrease by the same amount as available clicks (in addition to revenue lost from direct impact) due to reduced usage. This figure is directly available from usage studies

– Another approach considers that all users would end-up with the same level of usage as current users which do not consume a lot of cultural content. This approach reveals the stickiness to the service due to its exhaustiveness and relevance. The population of users is split into 2 groups, one with strong cultural content consumption (1) and one with weak cultural content consumption (2). (1) and (2) have roughly the same size. It appears consumers in (2) have overall weaker usages than (1). The potential "indirect + direct" impact would be proportional to the loss of clicks if all users were to adopt the same usages as consumers in (2)

> **Google had a 92% to 96% market share in terms of users in 2014 for the considered geographies**; Assumption on other players' monetization capacity: 50% of Google's (industry estimate)

> *For Europe, the impacts in % have been assumed to be the average between Italy and France*

Methodology (4/5)

FINAL VERSION

2. TuneIn and the content aggregator market

> TuneIn revenues in a given geography are based on percentage of users in considered geography vs. worldwide # users / revenues ; based on publicly available figures, TuneIn market share is estimated at 20% of the market

> Direct impact is based on cultural content on radio stations (music & news), which is publicly available data at Europe level. Without this content, usage or number of channels would decrease proportionally, thus leading to less revenue (less inventory or lower fees)

> Indirect impact is based on contribution of cultural content to ubiquity and adherence, in addition to direct impact, based on estimates of real consumption of content in radio (cultural vs. non-cultural)

> *Impacts in % have been assumed to be similar across all countries (thus also for Europe)*

3. Facebook and the social media market

> **Facebook revenues** are estimated thanks to **revenue per user worldwide** and **number of users in a given geography**; worldwide and European **social media markets** are based on publicly available studies; Facebook market share has been assumed to be constant over Europe at 78%

> Facebook revenues are split between displays advertising, native advertising and payment & other fees, this split is public for Europe, and the same proportion has been applied throughout

> To calculate direct and indirect impacts, **only displays advertising and native advertising** have been taken into account, being directly related to usages (# of page views for display and length of read newsfeed for native advertising)

> **Direct impact** is calculated with the percentage of **cultural content published or shared on Facebook** applied to native advertising revenues: published and shared content are the only contributors to length of read newsfeed, thus proportionally generating inventory for native advertising

> For **indirect impact** the approach considered that all users would end-up with the same level of usage as current users which do not consume a lot of cultural content, for all types of actions. This approach reveals the stickiness to the service due to its richness. The population of users is split into 2 groups, one with strong cultural content consumption (1) and one with weak cultural content consumption (2). (1) and (2) have roughly the same size. It appears consumers in (2) have overall weaker usages than (1). The potential "indirect + direct" impact would be proportional to the loss of actions if all users were to adopt the same usages as consumers in (2) : as no one will click on / publish cultural content, cultural content consumers / influencers will use the site much less, thus reducing the overall inventory available for monetization

> *For Europe, the impacts in % have been assumed to be the average between Italy and France*

Methodology (5/5)

FINAL VERSION

4. Box and the personal cloud market

> Percentage of cultural content share with private storage is 11%, estimation based on private copy remuneration on hardware devices in France. Cultural content share for professional use is estimated at 0%

> This represents the direct impact. No indirect impact has been assessed

> *Impacts in % have been assumed to be similar across all countries (thus also for Europe)*

5. Youtube and video platform market

> Direct impact is estimated with percentage of musical and video cultural content : those figures are available from various studies; we have used figures from France (Hadopi study) for all estimates

> Revenue generation being driven by advertising inventory, i.e. number of views, there is a direct correlation between type of contents consumed and share of revenue

> Indirect impact is estimated based on the same approach as for Content Aggregators

> *Impacts in % have been assumed to be similar across all countries (thus also for Europe)*

It's character that
creates impact !
